

This architectural rendering illustrates the proposed new building for the San Diego Zoo, designed by Skidmore, OWing Merrill and Partners. The building is a large, modern structure with a curved, multi-level facade featuring extensive glass windows and a dark, textured exterior. It is situated on a hillside, with a landscaped area in the foreground that includes a pond, trees, and animal enclosures. The rendering shows the building's integration with the surrounding environment, including a walkway with visitors and a view of the zoo's existing landscape.
